1991 *Journal of Spacecraft and Rockets* Index

How to Use the Index

In the Subject Index, pages 734–738, each technical paper is listed under a maximum of three appropriate headings. Note the number in boldface type following each paper title, and use that number to locate the paper in the Chronological Index. The Author Index, pages 739–740, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 741–744, lists all papers by their unique code numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based, as well as the "CP" or conference volume number if the paper was published in a bound collection of meetings papers. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 1991, that paper also will appear in both the Subject and Chronological Indexes. Authors of Comments also are listed in the Author Index.

Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Spike-Nosed Projectiles: Computations and Dual Flow Modes in Supersonic Flight A91-062
Effect of Forebody Strakes on Missile Asymmetric Vortices A91-061
Rarefied-Flow Aerodynamics Measurement Experiment on the Aeroassist Flight Experiment Vehicle A91-056
Rapid Prediction of Static Stability Characteristics of Slender-Wing Aerospace Vehicles A91-052
Navier-Stokes Computations of Vortex Asymmetries Controlled by Small Surface Imperfections A91-039
Missile Loads at High Angles of Attack A91-018
Prediction of Slender Body Coning Characteristics A91-007
Supersonic Aerodynamic Characteristics of Monoplanar Missiles with Low-Profile Quadriform Tails A91-002

Aerospace Plane

Utilizing Air-Turborocket and Rocket Propulsion for a Single-Stage-to-Orbit Vehicle A91-083

Configuration Design

Rapid Prediction of Static Stability Characteristics of Slender-Wing Aerospace Vehicles A91-052

Flight Mechanics

Approach and Landing Simulator for Space Shuttle Orbiter Touchdown Conditions A91-070

Performance

Utilizing Air-Turborocket and Rocket Propulsion for a Single-Stage-to-Orbit Vehicle A91-083

Structural Materials

Evaluation of Damage Fields Near Crack Tips in a Composite Solid Propellant A91-010

Energy

Photovoltaic Power

Solar Proton Events of 1989: Effects on Spacecraft Solar Arrays A91-107
Dielectric Charging Processes and Arcing Rates of High Voltage Solar Arrays A91-105
Estimates of Photochemically Deposited Contamination on the GPS Satellites A91-034

Solar Power

Solar Proton Events of 1989: Effects on Spacecraft Solar Arrays A91-107

Fluid Dynamics

Boundary Layers and Heat Transfer—Laminar

Three-Dimensional Flow Transport Modes in Directional Solidification During Space Processing A91-036
Structured and Unstructured Remeshing Method for High-Speed Flows A91-024

Boundary Layers and Heat Transfer—Turbulent

Wedge-Induced Turbulent Boundary-Layer Separation on a Roughened Surface at Mach 6.0 A91-096

Boundary-Layer Stability and Transition

Stability of the Boundary Layer on a Spinning Blunt-Nosed Cylinder A91-044
Stability of the Boundary Layer on a Spinning Semi-Infinite Circular Cylinder A91-042

Computational Fluid Dynamics

Gaseous Oxygen Cooling of the Space Transportation System Launch Pad Environment A91-104
Performance and Flow Calculations for a Gaseous H_2/O_2 Thruster A91-064
Spike-Nosed Projectiles: Computations and Dual Flow Modes in Supersonic Flight A91-062
Comparison of Hypersonic Experiments and PNS Predictions Part II: Aerodynamics A91-058
Comparison of Hypersonic Experiments and PNS Predictions Part I: Aerothermodynamics A91-057
External Tank Chill Effect on the Space Transportation System Launch Pad Environment A91-045
Stability of the Boundary Layer on a Spinning Blunt-Nosed Cylinder A91-044
Stability of the Boundary Layer on a Spinning Semi-Infinite Circular Cylinder A91-042
Navier-Stokes Computations of Vortex Asymmetries Controlled by Small Surface Imperfections A91-039
Structured and Unstructured Remeshing Method for High-Speed Flows A91-024
Low Reynolds Number Navier-Stokes Simulation for Rotating Liquid-Filled Containers A91-023
Fully Coupled Implicit Method for Thermochemical Nonequilibrium Air at Suborbital Flight Speeds A91-005

Hypersonic Flow

Wedge-Induced Turbulent Boundary-Layer Separation on a Roughened Surface at Mach 6.0 A91-096
Engineering Calculations of Three-Dimensional Inviscid Hypersonic Flowfields A91-095
Hypersonic Waveriders for Planetary Atomospheres A91-060
Comparison of Hypersonic Experiments and PNS Predictions Part II: Aerodynamics A91-058
Comparison of Hypersonic Experiments and PNS Predictions Part I: Aerothermodynamics A91-057
Structured and Unstructured Remeshing Method for High-Speed Flows A91-024
Low Reynolds Number Navier-Stokes Simulation for Rotating Liquid-Filled Containers A91-023
Tethered Aerothermodynamic Research Needs A91-008
Computation of Flowfields for Projectiles in Hypersonic Chemically Reacting Flows A91-004
Flowfield and Vehicle Parameter Influence on Results of Engineering Aerothermal Methods A91-003

Inlet, Nozzle, Diffusor, and Channel Flows

Performance and Flow Calculations for a Gaseous H_2/O_2 Thruster A91-064

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Rapid Prediction of Static Stability Characteristics of Slender-Wing Aerospace Vehicles A91-052

Plasmadynamics and MHD

Dielectric Charging Processes and Arcing Rates of High Voltage Solar Arrays A91-105
Current Collection by a Long Conducting Cylinder in a Flowing Magnetized Plasma A91-088
Aerobrake Plasmadynamics: Mcroscopic Effects A91-059
Model of Electron Collecting Plasma Contactors A91-043
Magnetic Sails and Interplanetary Travel A91-030

Rarefied Flows

Hypersonic Waveriders for Planetary Atomospheres A91-060
Rarefied-Flow Aerodynamics Measurement Experiment on the Aeroassist Flight Experiment Vehicle A91-056
Flight Stagnation-Point Heating Calculations on Aeroassist Flight Experiment Vehicle A91-019
Tethered Aerothermodynamic Research Needs A91-008

Reacting Flows and Combustion

Performance and Flow Calculations for a Gaseous H_2/O_2 Thruster A91-064
Atomic Oxygen Testing with Thermal Atom Systems: A Critical Evaluation A91-046
Flight Stagnation-Point Heating Calculations on Aeroassist Flight Experiment Vehicle A91-019

Separated Flows

Wedge-Induced Turbulent Boundary-Layer Separation on a Roughened Surface at Mach 6.0 A91-096
Prediction of Slender Body Coning Characteristics A91-007

Shock Waves and Detonations

Aerobrake Plasmadynamics: Macroscopic Effects A91-059

Subsonic Flow

Prediction of Slender Body Coning Characteristics A91-007

Supersonic Flow

Spike-Nosed Projectiles: Computations and Dual Flow Modes in Supersonic Flight A91-062

Hypersonic Waveriders for Planetary Atomospheres A91-060
Flight Stagnation-Point Heating Calculations on Aeroassist Flight Experiment Vehicle A91-019

Viscous Non-Boundary-Layer Flows

Comparison of Hypersonic Experiments and PNS Predictions Part II: Aerodynamics A91-058
Comparison of Hypersonic Experiments and PNS Predictions Part I: Aerothermodynamics A91-057
Three-Dimensional Flow Transport Modes in Directional Solidification During Space Processing A91-036
Low Reynolds Number Navier-Stokes Simulation for Rotating Liquid-Filled Containers A91-023

Vortices

Navier-Stokes Computations of Vortex Asymmetries Controlled by Small Surface Imperfections A91-039

Guidance, Control, and Dynamics Technology

Aircraft Guidance

Improved Airbreathing Launch Vehicle Performance with the Use of Rocket Propulsion A91-026

Astrodynamics

Mars Observer Orbit Determination Analysis A91-079
New Method for Estimating Low-Earth-Orbit Collision Probabilities A91-032

Control Theory

Limits on the Isolation of Stochastic Vibration for Microgravity Space Experiments A91-035

Flight Mechanics

Debris Evolution and Lifetime Following an Orbital Breakup A91-101

Information Processing

Multicarrier Demodulator Architecture for Onboard Processing Satellites A91-086

Launch Vehicle Dynamics

Ascent Performance Issues of a Vertical-Takeoff Rocket Launch Vehicle A91-027

Launch Vehicle Guidance and Control

Guidance Scheme for a Mach 3 Staged Gliding Booster A91-084
Ascent Performance Issues of a Vertical-Takeoff Rocket Launch Vehicle A91-027

Missile Dynamics

Advanced Technologies for Rocket Single-Stage-to-Orbit Vehicles A91-097
Missile Loads at High Angles of Attack A91-018

Navigation

Orbital Elements Determination for Breakup and Debris A91-087
Mars Observer Trajectory and Orbit Control A91-080
Mars Observer Orbit Determination Analysis A91-079

Optimization Techniques

Limits on the Isolation of Stochastic Vibration for Microgravity Space Experiments A91-035

Remote Control

Acceleration and Pulse Control in Simulated Spacecraft Docking Manuevers A91-109

Signal Processing

Multicarrier Demodulator Architecture for Onboard Processing Satellites A91-086

Spacecraft Dynamics

Analysis of Spacelab 3 Residual Acceleration Data A91-106
Structural Dynamic Performance of a Geostationary Microwave Radiometer A91-093
Statite: A Spacecraft That Does Not Orbit A91-090
Reorientation of Rotating Fluid in Microgravity Environment With and Without Gravity Jitters A91-011

Spacecraft Guidance and Control

Mars Observer Trajectory and Orbit Control A91-080
Approach and Landing Simulator for Space Shuttle Orbiter Touchdown Conditions A91-070
Improved Airbreathing Launch Vehicle Performance with the Use of Rocket Propulsion A91-026

System Identification

Development of Test-Analysis Models for Large Space Structures Using Substructure Representations A91-037

Interdisciplinary Topics

Analytical and Numerical Methods

Optimization of Payload Placement on Arbitrary Spacecraft A91-091

Atmospheric and Space Sciences

Relationship Between Electrostatic Discharges on Spacecraft P78-2 and the Electron Environment A91-103

Dynamics of Flames and Reactive Systems and Dynamics of Shock Waves, Explosions, and Detonations

J. R. Bowen, N. Manson, A. K. Oppenheim, and R. I. Soloukhin, editors

The dynamics of explosions is concerned principally with the interrelationship between the rate processes of energy deposition in a compressible medium and its concurrent nonsteady flow as it occurs typically in explosion phenomena. Dynamics of reactive systems is a broader term referring to the processes of coupling between the dynamics of fluid flow and molecular transformations in reactive media occurring in any combustion system. *Dynamics of Flames and Reactive Systems* covers premixed flames, diffusion flames, turbulent combustion, constant volume combustion, spray combustion nonequilibrium flows, and combustion diagnostics. *Dynamics of Shock Waves, Explosions and Detonations* covers detonations in gaseous mixtures, detonations in two-phase systems, condensed explosives, explosions and interactions.

Dynamics of Flames and Reactive Systems
1985 766 pp. illus., Hardback
ISBN 0-915928-92-2
AIAA Members $59.95
Nonmembers $92.95
Order Number V-95

Dynamics of Shock Waves, Explosions and Detonations
1985 595 pp., illus. Hardback
ISBN 0-915928-91-4
AIAA Members $54.95
Nonmembers $86.95

Chronological Index

A91-001 Martian Regolith as Space Radiation Shielding. L. C. Simonsen, J. E. Nealy, L. W. Townsend and J. W. Wilson, *NASA Langley Research Center* (**28**, 1, p. 7) Synoptic

A91-002 Supersonic Aerodynamic Characteristics of Monoplanar Missiles with Low-Profile Quadriform Tails. A. B. Blair Jr., *NASA Langley Research Center* (**28**, 1, p. 9) Article based on AIAA Paper 90-0620

A91-003 Flowfield and Vehicle Parameter Influence on Results of Engineering Aerothermal Methods. Kathryn E. Wurster, E. Vincent Zoby and Richard A. Thompson, *NASA Langley Research Center* (**28**, 1, p. 16) Article based on AIAA Paper 89-1769

A91-004 Computation of Flowfields for Projectiles in Hypersonic Chemically Reacting Flows. Klaus A. Hoffmann, *Wichita State University*; Ting-Lung Chiang, *University of Texas at Austin*; and Walter H. Rutledge, *Sandia National Laboratories* (**28**, 1, p. 23) Article

A91-005 Fully Coupled Implicit Method for Thermochemical Nonequilibrium Air at Suborbital Flight Speeds. Chul Park, *NASA Ames Research Center*; and Seokkwan Yoon, *MCAT Institute* (**28**, 1, p. 31) Article based on AIAA Paper 89-1974 CP895

A91-006 Stagnation-Point Radiative Heating Relations for Earth and Mars Entries. M. E. Tauber, *NASA Ames Research Center*; and K. Sutton, *NASA Langley Research Center* (**28**, 1, p. 40) Article

A91-007 Prediction of Slender Body Coning Characteristics. L. E. Ericsson, *Lockheed Missiles & Space Company, Inc.* (**28**, 1, p. 43) Article based on AIAA Paper 89-2223 CP896

A91-008 Tethered Aerothermodynamic Research Needs. F. C. Hurlbut, *University of California at Berkeley*; and J. L. Potter, *Vanderbilt University* (**28**, 1, p. 50) Article based on AIAA Paper 90-0533

A91-009 Simple, Inexpensive Optical Beacon for Use on Small Satellites. T. L. Hayhurst, M. N. Osibov, R. W. Russell and R. J. Maulfair, *The Aerospace Corporation*; and R. Fleeter, *Defense Systems Incorporated* (**28**, 1, p. 58) Article

A91-010 Evaluation of Damage Fields Near Crack Tips in a Composite Solid Propellant. C. T. Liu, *Astronautics Laboratory (AFSC), Edwards AFB* (**28**, 1, p. 64) Article based on AIAA Paper 88-2284 CP882

A91-011 Reorientation of Rotating Fluid in Microgravity Environment With and Without Gravity Jitters. R. J. Hung, C. C. Lee and K. L. Shyu, *University of Alabama in Huntsville* (**28**, 1, p. 71) Article

A91-012 Combustion Efficiencies of Aluminum and Boron in Solid Propellants. Tohru Mitani and Muneo Izumikawa, *National Aerospace Laboratory, Kakuda Research Center, Japan* (**28**, 1, p. 79) Article

A91-013 Propulsive Options for a Manned Mars Transportation System. Robert D. Braun, *NASA Langley Research Center*; and Donald J. Blersch, *Analytic Services, Inc.* (**28**, 1, p. 85) Article based on AIAA Paper 89-2950

A91-014 Magnetic Signatures for Satellite Anomalies. Hing-Lan Lam and Jaroslava Hruska, *Geological Survey of Canada* (**28**, 1, p. 93) Article

A91-015 Consort 3 Flight Experiments. Francis C. Wessling, *University of Alabama in Huntsville*; and George W. Maybee, *McDonnell Douglas Space Systems Company* (**28**, 1, p. 100) Article

A91-016 Spacecraft Protective Structures Design Optimization. Robert A. Mog, *Science Applications International Corporation* (**28**, 1, p. 109) Article based on AIAA Paper 90-0087

A91-017 Response of Spacecraft Window Materials to Hypervelocity Projectile Impact. William P. Schonberg, *University of Alabama in Huntsville* (**28**, 1, p. 118) Article

A91-018 Missile Loads at High Angles of Attack. Richard M. Howard and Archibald S. Dunn, *Naval Postgraduate School* (**28**, 1, p. 124) Engineering Note

A91-019 Flight Stagnation-Point Heating Calculations on Aeroassist Flight Experiment Vehicle. H. H. Hamilton II, Roop N. Gupta and Jim J. Jones, *NASA Langley Research Center* (**28**, 1, p. 125) Engineering Note

A91-020 Thermal Redesign of the Galileo Spacecraft for a VEEGA Trajectory. Ronald T. Reeve, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 2, p. 130) Article based on AIAA Paper 89-1748

A91-021 Thermal Design of the Galileo Spun and Despun Science. James W. Stultz, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 2, p. 139) Article based on AIAA Paper 89-1750

A91-022 Thermal Design of the Galileo Bus and Retropropulsion Module. James W. Stultz, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 2, p. 146) Article based on AIAA Paper 89-1749

A91-023 Low Reynolds Number Navier-Stokes Simulation for Rotating Liquid-Filled Containers. Michael J. Nusca, *U. S. Army Ballistic Research Laboratory, Aberdeen Proving Ground* (**28**, 2, p. 152) Article

A91-024 Structured and Unstructured Remeshing Method for High-Speed Flows. Gururaja R. Vemaganti, *Lockheed Engineering and Sciences Company*; Earl A. Thornton, *University of Virginia*; and Allan R. Wieting, *NASA Langley Research Center* (**28**, 2, p. 158) Article based on AIAA Paper 90-0401

A91-025 Approximate Method for the Calculation of Nonequilibrium Radiative Heat Transfer. Robert B. Greendyke, *Analytical Services and Materials, Inc.*; and Lin C. Hartung, *NASA Langley Research Center* (**28**, 2, p. 165) Article based on AIAA Paper 90-0135

A91-026 Improved Airbreathing Launch Vehicle Performance with the Use of Rocket Propulsion. H. G. Kauffman, R. V. Grandhi, W. L. Hankey and P. J. Belcher, *Wright State University* (**28**, 2, p. 172) Article

A91-027 Ascent Performance Issues of a Vertical-Takeoff Rocket Launch Vehicle. Richard W. Powell, J. Christopher Naftel and Christopher I. Cruz, *NASA Langley Research Center* (**28**, 2, p. 179) Article

A91-028 Abort Capabilities of Rocket-Powered Single-Stage Launch Vehicles. Douglas O. Stanley and Richard W. Powell, *NASA Langley Research Center* (**28**, 2, p. 184) Article based on AIAA Paper 90-0296

A91-029 Shuttle Evolution: Improved Aft Propulsion System. Witalij Karakulko, *NASA Johnson Space Center*; and Scott R. Frazier, *McDonnell Douglas Space Systems Company* (**28**, 2, p. 192) Article based on AIAA Paper 89-2518

A91-030 Magnetic Sails and Interplanetary Travel. Robert M. Zubrin, *Martin Marietta Astronautics*; and Dana G. Andrews, *Boeing Aerospace* (**28**, 2, p. 197) Article based on AIAA Paper 89-2441

A91-031 Meteoroid and Orbital Debris Record of the Long Duration Exposure Facility's Frame. Michael Zolensky, *NASA Johnson Space Center*; Dale Atkinson, *POD Associates*; Thomas See, *Lockheed Engineering and Science Company*; Martha Allbrooks, *S-Cubed*; Charles Simon, *McDonnell Center for Space Sciences, Washington University*; Miria Finckenor, *NASA Marshall Space Flight Center*; and Jack Warren, *Lockheed Engineering and Science Company* (**28**, 2, p. 204) Article

A91-032 New Method for Estimating Low-Earth-Orbit Collision Probabilities. John D. Vedder and Jill L. Tabor, *McDonnell Douglas Space Systems Company* (**28**, 2, p. 210) Article

A91-033 Mars Global Reference Atmospheric Model for Mission Planning and Analysis. C. G. Justus, *Georgia Institute of Technology* (**28**, 2, p. 216) Article based on AIAA Paper 90-0004

A91-034 Estimates of Photochemically Deposited Contamination on the GPS Satellites. Alan C. Tribble and James W. Haffner, *Rockwell International* (**28**, 2, p. 222) Article

A91-035 Limits on the Isolation of Stochastic Vibration for Microgravity Space Experiments. C. R. Knospe and P. E. Allaire, *University of Virginia* (**28**, 2, p. 229) Article

A91-036 Three-Dimensional Flow Transport Modes in Directional Solidification During Space Processing. W. A. Arnold, D. A. Jacqmin, R. L. Gaug and A. Chait, *NASA Lewis Research Center* (**28**, 2, p. 238) Article based on AIAA Paper 90-0409

A91-037 Development of Test-Analysis Models for Large Space Structures Using Substructure Representations. Daniel C. Kammer, *University of Wisconsin*; and Christopher C. Flanigan, *SDRC, Inc.* (**28**, 2, p. 244) Article

A91-038 Design and Fabrication of an Erectable Truss for Precision Segmented Reflector Application. Harold G. Bush, Catherine L. Herstrom, Walter L. Heard Jr., Timothy J. Collins and W. B. Fichter, *NASA Langley Research Center*; Richard E. Wallsom and James E. Phelps, *Lockheed Engineering and Sciences Company* (**28**, 2, p. 251) Article based on AIAA Paper 90-0999 CP902

A91-039 Navier-Stokes Computations of Vortex Asymmetries Controlled by Small Surface Imperfections. Peter M. Hartwich, *ViGYAN, Inc.*; Robert M. Hall, *NASA Langley Research Center*; and Michael J. Hemsch, *PRC Aerospace Technologies Division* (**28**, 2, p. 258) Article based on AIAA Paper 90-0385

A91-040 Atmospheres of Earth, Mars, and Venus, as Defined by Entry Probe Experiments. Alvin Seiff, *San Jose State University Foundation, NASA Ames Research Center* (**28**, 3, p. 265) Article based on AIAA Paper 90-0765

A91-041 Supersonic Submunition Aerodynamics During Dispense. S. C. Perkins Jr. and M. F. E. Dillenius, *Nielsen Engineering & Research, Inc.* (**28**, 3, p. 276) Article based on AIAA Paper 88-0335

A91-042 Stability of the Boundary Layer on a Spinning Semi-Infinite Circular Cylinder. Kai-Hsiung Kao and Chuen-Yen Chow, *University of Colorado* (**28**, 3, p. 284) Article based on AIAA Paper 90-0116

A91-043 Model of Electron Collecting Plasma Contactors. V. A. Davis, I. Katz, M. J. Mandell and D. E. Parks, *S-CUBED Division of Maxwell Laboratories, Inc.* (**28**, 3, p. 292) Article

A91-044 Stability of the Boundary Layer on a Spinning Blunt-Nosed Cylinder. Kai-Hsiung Kao and Chuen-Yen Chow, *University of Colorado* (**28**, 3, p. 299) Article based on AIAA Paper 90-0117

A91-045 External Tank Chill Effect on the Space Transportation System Launch Pad Environment. R. A. Ahmad and S. Boraas, *Thiokol Corporation* (**28**, 3, p. 306) Article

A91-046 Atomic Oxygen Testing with Thermal Atom Systems: A Critical Evaluation. Steven L. Koontz, Keith Albyn and Lubert J. Leger, *NASA Johnson Space Center* (**28**, 3, p. 315) Article

A91-047 Environment-Induced Anomalies on the TDRS and the Role of Spacecraft Charging. S. Daughtridge, *Contel Federal Systems*; H. B. Garrett and A. Whittlesey, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 3, p. 324) Article based on AIAA Paper 90-0178

A91-048 New Deployable Truss Concepts for Large Antenna Structures or Solar Concentrators. K. A. Takamatsu, *Fuji Heavy Industries, Ltd., Japan*; and J. Onoda, *Institute of Space and Astronautical Science, Japan* (**28**, 3, p. 330) Article based on AIAA Paper 89-1346 CP891

A91-049 Application of Material Nonlinearity to a Composite Pressure Vessel Design. David Cohen, *Hercules Aerospace Company* (**28**, 3, p. 339) Article based on AIAA Paper 90-1002 CP902

A91-050 Orbital Debris Environment for Spacecraft in Low Earth Orbit. Donald J. Kessler, *NASA Johnson Space Center* (**28**, 3, p. 347) Article based on AIAA Paper 90-1353

A91-051 Prototype Expert System Workstation for Satellite Anomaly Resolution. S. R. Turner, P. K. Mangan, M. D. Meloan and C. B. Simmons, *The Aerospace Corporation* (**28**, 3, p. 352) Engineering Note based on AIAA Paper 90-0323

A91-052 Rapid Prediction of Static Stability Characteristics of Slender-Wing Aerospace Vehicles. L. E. Ericsson and H. H. C. King, *Lockheed Missiles & Space Company, Inc.* (**28**, 3, p. 354) Engineering Note based on AIAA Paper 90-0301

A91-053 Titan Improvement Study: Hydrogen Core Stages. James A. Martin, *NASA Langley Research Center* (**28**, 3, p. 356) Engineering Note

A91-054 Hypersonic Nonequilibrium Viscous Solutions over Slender Bodies. E. V. Zoby, *NASA Langley Research Center*; K. P. Lee, *Vigyan Research Associates, Inc.*; and R. N. Gupta, *NASA Langley Research Center* (**28**, 3, p. 358) Engineering Note

A91-055 Aerodynamic Requirements of a Manned Mars Aerobraking Transfer Vehicle. Robert D. Braun and Richard W. Powell, *NASA Langley Research Center* (**28**, 4, p. 361) Article based on AIAA Paper 90-2817 CP906

A91-056 Rarefied-Flow Aerodynamics Measurement Experiment on the Aeroassist Flight Experiment Vehicle. Robert C. Blanchard, *NASA Langley Research Center* (**28**, 4, p. 368) Article based on AIAA Paper 89-0636

A91-057 Comparison of Hypersonic Experiments and PNS Predictions Part I: Aerothermodynamics. Bilal A. Bhutta and Clark H. Lewis, *VRA, Inc.* (**28**, 4, p. 376) Article based on AIAA Paper 90-3068 CP908

A91-058 Comparison of Hypersonic Experiments and PNS Predictions Part II: Aerodynamics. Bilal A. Bhutta and Clark H. Lewis, *VRA, Inc.* (**28**, 4, p. 387) Article based on AIAA Paper 90-3068 CP908

A91-059 Aerobrake Plasmadynamics: Macroscopic Effects. John V. Shebalin, *NASA Langley Research Center* (**28**, 4, p. 394) Article based on AIAA Paper 90-1559

A91-060 Hypersonic Waveriders for Planetary Atomospheres. John D. Anderson Jr., Mark J. Lewis and Ajay P. Kothari, *University of Maryland*; and Stephen Corda, *Johns Hopkins Applied Physics Laboratory* (**28**, 4, p. 401) Article based on AIAA Paper 90-0538

A91-061 Effect of Forebody Strakes on Missile Asymmetric Vortices. Chih-Chung Yuan and Richard M. Howard, *Naval Postgraduate School* (**28**, 4, p. 411) Article based on AIAA Paper 91-286 CP916

A91-062 Spike-Nosed Projectiles: Computations and Dual Flow Modes in Supersonic Flight. Ameer G. Mikhail, *U.S. Army Ballistic Research Laboratory, Aberdeen Proving Ground* (**28**, 4, p. 418) Article based on AIAA Paper 89-1820

A91-063 Liquid Motions in Nonaxisymmetric, Partially Filled Containers Rotating at Zero Gravity. D. Weihs and F. T. Dodge, *Southwest Research Institute* (**28**, 4, p. 425) Article

A91-064 Performance and Flow Calculations for a Gaseous H_2/O_2 Thruster. S. C. Kim, *Sverdrup Technology, Inc.*; and T. J. VanOverbeke, *NASA Lewis Research Center* (**28**, 4, p. 433) Article based on AIAA Paper 90-2490

A91-065 Preliminary Design Considerations for 10-40 Meter-Diameter Precision Truss Reflectors. Martin M. Mikulas Jr. and Timothy J. Collins, *NASA Langley Research Center*; and John M. Hedgepeth, *Astro Aerospace Corporation* (**28**, 4, p. 439) Article based on AIAA Paper 90-1000 CP902

A91-066 Optimal Temperature Estimation for Modeling the Thermal Elastic Shock Disturbance Torque. Darrell F. Zimbelman and Raymond V. Welch, *Fairchild Space & Defense Corporation*; and George H. Born, *University of Colorado* (**28**, 4, p. 448) Article

A91-067 Thermoelastic Analysis of Space Structures in Periodic Motion. Dan Givoli and Omri Rand, *Technion—Israel Institute of Technology* (**28**, 4, p. 457) Article

A91-068 Orbital Debris Detection: Techniques and Issues. Nicholas L. Johnson and David J. Nauer, *Teledyne Brown Engineering* (**28**, 4, p. 465) Article based on AIAA Paper 90-1330

A91-069 Determination of Breakup Initial Conditions. Darren S. McKnight, *Kaman Sciences Corporation* (**28**, 4, p. 470) Article based on AIAA Paper 91-0299

A91-070 Approach and Landing Simulator for Space Shuttle Orbiter Touchdown Conditions. Keith D. Walyus, *NASA Johnson Space Center*; and Charles Dalton, *University of Houston* (**28**, 4, p. 478) Article

A91-071 Low Energy Trajectories to Mars via Gravity Assist from Venus to Earth. S. N. Williams and J. M. Longuski, *Purdue University* (**28**, 4, p. 486) Engineering Note

A91-072 Mars Observer Project: An Introduction. E. L. McKinley, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 489) Article

A91-073 Mars Observer Mission and Systems Overview. Suzanne Palocz, *General Electric Company* (**28**, 5, p. 491) Article

A91-074 Mars Observer: The Next Mars Mission. Arden L. Albee, *California Institute of Technology*; and Frank D. Palluconi, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 498) Article

A91-075 Mars Observer Instrument Complement. Fred G. Komro and Frank N. Hujber, *General Electric Company* (**28**, 5, p. 501) Article

A91-076 Mars Observer Spacecraft Description. Dennis L. Potts, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 507) Article

A91-077 Mars Observer Trajectory and Orbit Design. Joseph G. Beerer and Ralph B. Roncoli, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 515) Article

A91-078 Mars Observer Mission Plan. William H. Blume, Suzanne R. Dodd and Charles W. Whetsel, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 522) Article

A91-079 Mars Observer Orbit Determination Analysis. Pasquale Esposito and Duane Roth, *Jet Propulsion Laboratory, California Institute of Technology*; and Stuart Demcak, *OAO Corporation* (**28**, 5, p. 530) Article

A91-080 Mars Observer Trajectory and Orbit Control. C. A. Halsell and W. E. Bollman, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 536) Article

A91-081 Mars Observer Mission Operations. Kerry D. Erickson and Edward L. McKinley, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 5, p. 542) Article

A91-082 Thermochemical Nonequilibrium Issues for Earth Re-Entry of Mars Mission Vehicles. R. A. Mitcheltree and P. A. Gnoffo, *NASA Langley Research Center* (**28**, 5, p. 552) Article based on AIAA Paper 90-1698

A91-083 Utilizing Air-Turborocket and Rocket Propulsion for a Single-Stage-to-Orbit Vehicle. Roger A. Lepsch Jr., Douglas O. Stanley, Christopher I. Cruz and Shelby J. Morris Jr., *NASA Langley Research Center* (**28**, 5, p. 560) Article based on AIAA Paper 90-0295

A91-084 Guidance Scheme for a Mach 3 Staged Gliding Booster. J. Christopher Naftel and Richard W. Powell, *NASA Langley Research Center* (**28**, 5, p. 567) Article based on AIAA Paper 90-0223

A91-085 Analytical Modeling of No-Vent Fill Process. David A. Vaughan, *Martin Marietta Manned Space Systems*; and George R. Schmidt, *NASA Marshall Space Flight Center* (**28**, 5, p. 574) Article based on AIAA Paper 90-2377

A91-086 Multicarrier Demodulator Architecture for Onboard Processing Satellites. L. P. Eugene, P. J. Fernandes, M. M. Jamali and S. C. Kwatra, *University of Toledo*; and J. Budinger, *NASA Lewis Research Center* (**28**, 5, p. 580) Article based on AIAA Paper 90-0812 CP901

A91-087 Orbital Elements Determination for Breakup and Debris. Stephen H. Knowles, *Naval Space Surveillance Center* (**28**, 5, p. 587) Article based on AIAA Paper 90-1348

A91-088 Current Collection by a Long Conducting Cylinder in a Flowing Magnetized Plasma. Bharat I. Vashi and Nagendra Singh, *University of Alabama in Huntsville* (**28**, 5, p. 592) Article based on AIAA Paper 90-0724

A91-089 Slag and Thermal Environment of a Spinning Rocket Motor. I-Shih Chang, *The Aerospace Corporation* (**28**, 5, p. 599) Article based on AIAA Paper 90-2205

A91-090 Statite: A Spacecraft That Does Not Orbit. Robert L. Forward, *Forward Unlimited* (**28**, 5, p. 606) Article based on AIAA Paper 89-2546

A91-091 Optimization of Payload Placement on Arbitrary Spacecraft. Melvin J. Ferebee Jr. and Cheryl L. Allen, *NASA Langley Research Center* (**28**, 5, p. 612) Engineering Note

A91-092 Large Solar Proton Events and Geosynchronous Communication Spacecraft Solar Arrays. L. J. Lanzerotti and D. W. Maurer, *AT&T Bell Laboratories*; H. H. Sauer and R. D. Zwickl, *NOAA Space Environmental Laboratory* (**28**, 5, p. 614) Engineering Note

A91-093 Structural Dynamic Performance of a Geostationary Microwave Radiometer. Deborah M. Wahls and Jeffery T. Farmer, *NASA Langley Research Center*; and David W. Sleight, *University of Illinois* (**28**, 6, p. 617) Synoptic based on AIAA Paper 91-0428

A91-094 Parametric Study of Dissociation and Ionization Models at 12 Kilometers/Second. R. A. Mitcheltree, *NASA Langley Research Center* (**28**, 6, p. 619) Article based on AIAA Paper 91-1368

A91-095 Engineering Calculations of Three-Dimensional Inviscid Hypersonic Flowfields. Christopher J. Riley, *NASA Langley Research Center*; and Fred J. DeJarnette, *North Carolina State University* (**28**, 6, p. 628) Article based on AIAA Paper 91-0701

A91-096 Wedge-Induced Turbulent Boundary-Layer Separation on a Roughened Surface at Mach 6.0. P. J. Disimile, *University of Cincinnati*; and N. E. Scaggs, *Air Force Wright Research and Development Center, Wright-Patterson AFB* (**28**, 6, p. 636) Article based on AIAA Paper 89-2163 CP896

A91-097 Advanced Technologies for Rocket Single-Stage-to-Orbit Vehicles. Alan W. Wilhite, Lance B. Bush, Christopher I. Cruz, Roger A. Lepsch, W. Douglas Morris, Douglas O. Stanley and K. E. Wurster, *NASA Langley Research Center* (**28**, 6, p. 646) Article based on AIAA Paper 91-0540

A91-098 Plasma-Deposited Protective Coatings for Spacecraft Applications. D. G. Zimcik, *Canadian Space Agency*; M. R. Wertheimer, *Ecole Polytechnique, Canada*; K. B. Balmain and R. C. Tennyson, *University of Toronto* (**28**, 6, p. 652) Article

A91-099 Dynamic Finite Element Analysis of Solid Propellant Impact Test. W. So and E. C. Francis, *United Technologies* (**28**, 6, p. 658) Article based on AIAA Paper 90-2459

A91-100 Using Adaptive Structures to Enable Future Missions by Relaxing Ground Test Requirements. Ben K. Wada, James L. Fanson and G.-S. Chen, *Jet Propulsion Laboratory, California Institute of Technology* (**28**, 6, p. 663) Article

A91-101 Debris Evolution and Lifetime Following an Orbital Breakup. V. A. Chobotov and D. B. Spencer, *The Aerospace Corporation* (**28**, 6, p. 670) Article based on AIAA Paper 90-0085

A91-102 MU Radar Measurements of Orbital Debris. Toru Sato, Hidetoshi Kayama, Akira Furusawa and Iwane Kimura, *Kyoto University, Japan* (**28**, 6, p. 677) Article based on AIAA Paper 90-1343

A91-103 Relationship Between Electrostatic Discharges on Spacecraft P78-2 and the Electron Environment. Harry C. Koons and David J. Gorney, *The Aerospace Corporation* (**28**, 6, p. 683) Article

A91-104 Gaseous Oxygen Cooling of the Space Transportation System Launch Pad Environment. R. A. Ahmad, E. C. Mathias and S. Boraas, *Thiokol Corporation* (**28**, 6, p. 689) Article

A91-105 Dielectric Charging Processes and Arcing Rates of High Voltage Solar Arrays. Mengu Cho and Daniel E. Hastings, *Massachusetts Institute of Technology* (**28**, 6, p. 698) Article

A91-106 Analysis of Spacelab 3 Residual Acceleration Data. Melissa J. B. Rogers and J. Iwan D. Alexander, *University of Alabama in Huntsville* (**28**, 6, p. 707) Article

A91-107 Solar Proton Events of 1989: Effects on Spacecraft Solar Arrays. D. C. Marvin and D. J. Gorney, *The Aerospace Corporation* (**28**, 6, p. 713) Article

A91-108 Positioning Satellite System Using Intersatellite Communication. Kenichi Inamiya, *Mitsubishi Electric Corporation* (**28**, 6, p. 720) Article

A91-109 Acceleration and Pulse Control in Simulated Spacecraft Docking Manuevers. Adam R. Brody, *Sterling Software*; and Stephen R. Ellis, *NASA Ames Research Center* (**28**, 6, p. 728) Engineering Note based on AIAA Paper 91-0787

A91-110 Atomic Oxygen Protection of Carbon and Polycarbonate Using Boron Carbide Coating. Bruce M. Swinyard, *Rutherford Appleton Laboratory, Chilton, UK* (**28**, 6, p. 730) Engineering Note
